### Journal's performance

#### Journal Impact factor

The Journal Impact Factor (JIF) is a journal-level metric calculated from data gathered in the Web of Science Core Collection. It should be used with care because it is influenced by many factors, such as the volume of publication and citations characteristic of the journal's subject area and type of journal. The Journal Impact Factor can complement expert opinion and informed peer review. In the context of academic evaluation for tenure, it is inappropriate to use a journal-level metric as a proxy measure for individual researchers' contributions, or articles. [Learn more](#)
